Gene Summary:This gene encodes a member of the arm-repeat (armadillo) and plakophilin gene families.<br/>Plakophilin proteins contain numerous armadillo repeats, localize to cell desmosomes and<br/>nuclei, and participate in linking cadherins to intermediate filaments in the cytoskeleton. This<br/>protein may be involved in molecular recruitment and stabilization during desmosome<br/>formation. Mutations in this gene have been associated with the ectodermal dysplasia/skin<br/>fragility syndrome. Two transcript variants encoding different isoforms have been found for<br/>this gene.
