## Product datasheet for RC217014L3V

## Twinkle (TWNK) (NM\_021830) Human Tagged ORF Clone Lentiviral Particle

## **Product data:**

Product Type:	Lentiviral Particles
Product Name:	Twinkle (TWNK) (NM_021830) Human Tagged ORF Clone Lentiviral Particle
Symbol:	Twinkle
Synonyms:	ATXN8; C10orf2; IOSCA; MTDPS7; PEO; PEO1; PEOA3; PRLTS5; SANDO; SCA8; TWINL
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
Tag:	Myc-DDK
ACCN:	NM_021830
ORF Size:	2052 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC217014).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 021830.3</u>
RefSeq Size:	3630 bp
RefSeq ORF:	2055 bp
Locus ID:	56652
UniProt ID:	<u>Q96RR1</u>
Cytogenetics:	10q24.31
Protein Families:	Druggable Genome
MW:	77 kDa

Gene Summary:This gene encodes a hexameric DNA helicase which unwinds short stretches of double-<br/>stranded DNA in the 5' to 3' direction and, along with mitochondrial single-stranded DNA<br/>binding protein and mtDNA polymerase gamma, is thought to play a key role in mtDNA<br/>replication. The protein localizes to the mitochondrial matrix and mitochondrial nucleoids.<br/>Mutations in this gene cause infantile onset spinocerebellar ataxia (IOSCA) and progressive<br/>external ophthalmoplegia (PEO) and are also associated with several mitochondrial depletion<br/>syndromes. Alternative splicing results in multiple transcript variants encoding distinct<br/>isoforms.[provided by RefSeq, Aug 2009]
