RBFOX1 (NM_145893) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: RBFOX1 (NM_145893) Human Tagged ORF Clone Lentiviral Particle

Symbol: RBFOX²

Synonyms: 2BP1; A2BP1; FOX-1; FOX1; HRNBP1

Mammalian Cell

Selection:

ACCN:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

NM 145893

Tag: Myc-DDK

ORF Size: 1185 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC217020).

Sequence:

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 145893.1

 RefSeq Size:
 3315 bp

 RefSeq ORF:
 1188 bp

 Locus ID:
 54715

 UniProt ID:
 Q9NWB1

 Cytogenetics:
 16p13.3

MW: 42.2 kDa

Gene Summary:

The Fox-1 family of RNA-binding proteins is evolutionarily conserved, and regulates tissue-specific alternative splicing in metazoa. Fox-1 recognizes a (U)GCAUG stretch in regulated exons or in flanking introns. The protein binds to the C-terminus of ataxin-2 and may contribute to the restricted pathology of spinocerebellar ataxia type 2 (SCA2). Ataxin-2 is the product of the SCA2 gene which causes familial neurodegenerative diseases. Fox-1 and ataxin-2 are both localized in the trans-Golgi network. Several alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Nov 2011]
