

Product datasheet for RC217387L3V

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

ITGB6 (NM_000888) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: ITGB6 (NM_000888) Human Tagged ORF Clone Lentiviral Particle

Symbol: ITGB6
Synonyms: Al1H

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

 Tag:
 Myc-DDK

 ACCN:
 NM_000888

 ORF Size:
 2364 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC217387).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 000888.3</u>

 RefSeq Size:
 2397 bp

 RefSeq ORF:
 2367 bp

 Locus ID:
 3694

 UniProt ID:
 P18564

 Cytogenetics:
 2q24.2

 Domains:
 INB. PSI

Protein Families: Druggable Genome, Transmembrane

ITGB6 (NM_000888) Human Tagged ORF Clone Lentiviral Particle - RC217387L3V

Protein Pathways: Arrhythmogenic right ventricular cardiomyopathy (ARVC), Dilated cardiomyopathy, ECM-

receptor interaction, Focal adhesion, Hypertrophic cardiomyopathy (HCM), Regulation of

actin cytoskeleton

MW: 85.8 kDa

Gene Summary: This gene encodes a protein that is a member of the integrin superfamily. Members of this

family are adhesion receptors that function in signaling from the extracellular matrix to the cell. Integrins are heterodimeric integral membrane proteins composed of an alpha chain and a beta chain. The encoded protein forms a dimer with an alpha v chain and this heterodimer can bind to ligands like fibronectin and transforming growth factor beta 1. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Sep 2013]
