MASP1 (NM_001031849) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: MASP1 (NM_001031849) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: MASP1

Synonyms: 3MC1; CRARF; CRARF1; MAP-1; MAP1; MAP4; MASP; MASP-3; MASP3; PRSS5; RaRF

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC217417).

Sgfl-Mlul

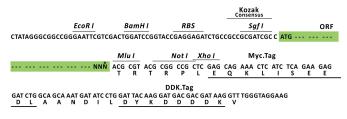

Sequence:

Cloning Scheme:

Restriction Sites:

Cloning sites used for ORF Shuttling:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_001031849

ORF Size: 1140 bp

MASP1 (NM_001031849) Human Tagged Lenti ORF Clone - RC217417L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001031849.1</u>

 RefSeq Size:
 2072 bp

 RefSeq ORF:
 1143 bp

 Locus ID:
 5648

 UniProt ID:
 P48740

Cytogenetics: 3q27.3

Protein Families: Druggable Genome, Protease

Protein Pathways: Complement and coagulation cascades

MW: 43.5 kDa

Gene Summary: This gene encodes a serine protease that functions as a component of the lectin pathway of

complement activation. The complement pathway plays an essential role in the innate and adaptive immune response. The encoded protein is synthesized as a zymogen and is activated when it complexes with the pathogen recognition molecules of lectin pathway, the mannose-binding lectin and the ficolins. This protein is not directly involved in complement

activation but may play a role as an amplifier of complement activation by cleaving

complement C2 or by activating another complement serine protease, MASP-2. The encoded

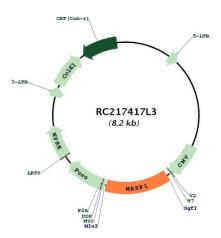

protein is also able to cleave fibrinogen and factor XIII and may may be involved in

coagulation. A splice variant of this gene which lacks the serine protease domain functions as an inhibitor of the complement pathway. Alternate splicing results in multiple transcript

variants.[provided by RefSeq, Apr 2010]
