

Product datasheet for RC217558L1

SI (NM_001041) Human Tagged Lenti ORF Clone

Product data:

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids
Product Name:	SI (NM_001041) Human Tagged Lenti ORF Clone
Tag:	Myc-DDK
Symbol:	SI
Mammalian Cell Selection:	None
Vector:	pLenti-C-Myc-DDK (PS100064)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC217558).
Restriction Sites:	Sgfl-Mlul
Cloning Scheme:	Cloning sites used for ORF Shuttling: Sgf i ORF Miu i GCG ATC GC ATG // NNN ACG CGT
	Ecori BamHi RBS Sgf i ORF CTATAGGGCGGCGGGGAATTCGTCGACTGGATCCGGGAGATCGCCGCGGGAGTCGC C ATG

* The last codon before the Stop codon of the ORF.

ACCN: **ORF Size:** NM_001041 5481 bp

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

SI (NM_001041) Human Tagged Lenti ORF Clone - RC217558L1

OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	 Centrifuge at 5,000xg for 5min. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. Close the tube and incubate for 10 minutes at room temperature. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 001041.1</u>
RefSeq Size:	6021 bp
RefSeq ORF:	5484 bp
Locus ID:	6476
UniProt ID:	<u>P14410</u>
Cytogenetics:	3q26.1
Protein Families:	Druggable Genome, Transmembrane
Protein Pathways:	Metabolic pathways, Starch and sucrose metabolism
MW:	209.3 kDa

SI (NM_001041) Human Tagged Lenti ORF Clone – RC217558L1

Gene Summary:This gene encodes a sucrase-isomaltase enzyme that is expressed in the intestinal brush
border. The encoded protein is synthesized as a precursor protein that is cleaved by
pancreatic proteases into two enzymatic subunits sucrase and isomaltase. These two
subunits heterodimerize to form the sucrose-isomaltase complex. This complex is essential
for the digestion of dietary carbohydrates including starch, sucrose and isomaltose.
Mutations in this gene are the cause of congenital sucrase-isomaltase deficiency.[provided by
RefSeq, Apr 2010]
