OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

## MGAT4B (NM\_054013) Human Tagged ORF Clone Lentiviral Particle - RC217589L4V

**Protein Pathways:** Metabolic pathways, N-Glycan biosynthesis

MW: 64.7 kDa

**Gene Summary:** This gene encodes a key glycosyltransferase that regulates the formation of tri- and

multiantennary branching structures in the Golgi apparatus. The encoded protein, in addition to the related isoenzyme A, catalyzes the transfer of N-acetylglucosamine (GlcNAc) from UDP-GlcNAc in a beta-1,4 linkage to the Man-alpha-1,3-Man-beta-1,4-GlcNAc arm of R-Man-alpha-1,6(GlcNAc-beta-1,2-Man-alpha-1,3)Man-beta-1,4-GlcNAc-beta-1,4-GlcNAc-beta-1-Asn. The encoded protein may play a role in regulating the availability of serum glycoproteins,

oncogenesis, and differentiation. [provided by RefSeq, Jul 2008]
