## Product datasheet for RC217670L3V

## KIF25 (NM\_030615) Human Tagged ORF Clone Lentiviral Particle

## **Product data:**

Product Type:	Lentiviral Particles
Product Name:	KIF25 (NM_030615) Human Tagged ORF Clone Lentiviral Particle
Symbol:	KIF25
Synonyms:	KNSL3
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
Tag:	Myc-DDK
ACCN:	NM_030615
ORF Size:	1152 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC217670).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 030615.1, NP 085118.2</u>
RefSeq Size:	1510 bp
RefSeq ORF:	1155 bp
Locus ID:	3834
UniProt ID:	<u>Q9UIL4</u>
Cytogenetics:	6q27
Protein Families:	Druggable Genome
MW:	40.5 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

Gene Summary:The protein encoded by this gene is a member of the kinesin-like protein family. Protein<br/>family members are microtubule-dependent molecular motors that transport organelles<br/>within cells and move chromosomes during cell division. However, the particular function of<br/>this gene product has not yet been determined. Two alternatively spliced transcript variants<br/>which encode products have been described. Other splice variants have been found that lack<br/>exon 2 and the initiation codon for translation. [provided by RefSeq, Jul 2008]
