

Product datasheet for RC217698

ASC 2 (NCOA6) (NM_014071) Human Tagged ORF Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	ASC 2 (NCOA6) (NM_014071) Human Tagged ORF Clone
Tag:	Myc-DDK
Symbol:	ASC 2
Synonyms:	AIB3; ASC2; NRC; PRIP; RAP250; TRBP
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-Entry (PS100001)
E. coli Selection:	Kanamycin (25 ug/mL)
ORF Nucleotide Sequence:	>RC217698 representing NM_014071 Red=Cloning site Blue=ORF Green=Tags(s)

Chromatograms: https://cdn.origene.com/chromatograms/ja1815_a10.zip

Restriction Sites: Sgfl-MluI

Cloning Scheme:

ACCN: NM_014071

ORF Size: 6189 bp

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. [More info](#)

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

- Reconstitution Method:**
1. Centrifuge at 5,000xg for 5min.
 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
 3. Close the tube and incubate for 10 minutes at room temperature.
 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: [NM_014071.5](#)

RefSeq Size: 7071 bp

RefSeq ORF: 6192 bp

Locus ID: 23054

UniProt ID: [Q14686](#)

Cytogenetics: 20q11.22

Protein Families: Druggable Genome, Transcription Factors

MW: 219.1 kDa

Gene Summary: The protein encoded by this gene is a transcriptional coactivator that can interact with nuclear hormone receptors to enhance their transcriptional activator functions. This protein has been shown to be involved in the hormone-dependent coactivation of several receptors, including prostanoid, retinoid, vitamin D3, thyroid hormone, and steroid receptors. Alternatively spliced transcript variants encoding different isoforms have been described for this gene. [provided by RefSeq, Jun 2011]
