<b>ORIGENE</b> Tau (MAPT) (NM_016834) Human Tagged ORF Clone Lentiviral Particle – RC217773L3V	
Protein Pathways:	Alzheimer's disease, MAPK signaling pathway
MW:	39.8 kDa
Gene Summary:	This gene encodes the microtubule-associated protein tau (MAPT) whose transcript undergoes complex, regulated alternative splicing, giving rise to several mRNA species. MAPT transcripts are differentially expressed in the nervous system, depending on stage of neuronal maturation and neuron type. MAPT gene mutations have been associated with several neurodegenerative disorders such as Alzheimer's disease, Pick's disease, frontotemporal dementia, cortico-basal degeneration and progressive supranuclear palsy.
