ORIGENE S	LC9A6 (NM_006359) Human Tagged ORF Clone Lentiviral Particle – RC217880L3V
Protein Pathways:	Cardiac muscle contraction
MW:	74 kDa
Gene Summary:	This gene encodes a sodium-hydrogen exchanger that is amember of the solute carrier family 9. The encoded protein localizes to early and recycling endosomes and may be involved in regulating endosomal pH and volume. Defects in this gene are associated with X- linked syndromic cognitive disability, Christianson type. Alternate splicing results in multiple transcript variants.[provided by RefSeq, Apr 2010]
