OTI Disclaimer: Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements.

Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RNF41 (NM_005785) Human Tagged ORF Clone Lentiviral Particle - RC217918L1V

Locus ID: 10193

UniProt ID: Q9H4P4

Cytogenetics: 12q13.3

Domains: RING

Protein Pathways: Endocytosis MW: 35.7 kDa

Gene Summary: This gene encodes an E3 ubiquitin ligase. The encoded protein plays a role in type 1 cytokine

receptor signaling by controlling the balance between JAK2-associated cytokine receptor degradation and ectodomain shedding. Alternative splicing results in multiple transcript

variants. [provided by RefSeq, Jun 2011]
