## XRCC4 (NM\_022550) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

Product Type: Lentiviral Particles

**Product Name:** XRCC4 (NM\_022550) Human Tagged ORF Clone Lentiviral Particle

Symbol: XRCC4
Synonyms: SSMED

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-mGFP (PS100071)

Tag: mGFP

**ACCN:** NM\_022550 **ORF Size:** 1008 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC218029).

Sequence:

Cytogenetics:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 022550.1

 RefSeq Size:
 1707 bp

 RefSeq ORF:
 1005 bp

 Locus ID:
 7518

 UniProt ID:
 Q13426

**Protein Families:** Druggable Genome

**Protein Pathways:** Non-homologous end-joining

5q14.2

ORIGENE

**MW:** 37.9 kDa

Gene Summary:

The protein encoded by this gene functions together with DNA ligase IV and the DNA-dependent protein kinase in the repair of DNA double-strand breaks. This protein plays a role in both non-homologous end joining and the completion of V(D)J recombination. Mutations in this gene can cause short stature, microcephaly, and endocrine dysfunction (SSMED). Alternate transcript variants such as NM\_022406 are unlikely to be expressed in some individuals due to a polymorphism (rs1805377) in the last splice acceptor site. [provided by RefSeq, Oct 2019]
