## Product datasheet for RC218031L1V

## EYA1 (NM\_172059) Human Tagged ORF Clone Lentiviral Particle

## Product data:

Product Type:	Lentiviral Particles
Product Name:	EYA1 (NM_172059) Human Tagged ORF Clone Lentiviral Particle
Symbol:	EYA1
Synonyms:	BOP; BOR; BOS1; OFC1
Mammalian Cell Selection:	None
Vector:	pLenti-C-Myc-DDK (PS100064)
Tag:	Myc-DDK
ACCN:	NM_172059
ORF Size:	1671 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC218031).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 172059.1, NP 742056.1</u>
RefSeq Size:	3610 bp
RefSeq ORF:	1761 bp
Locus ID:	2138
UniProt ID:	<u>Q99502</u>
Cytogenetics:	8q13.3
Protein Families:	Druggable Genome, Phosphatase, Transcription Factors
MW:	60.5 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

Gene Summary:This gene encodes a member of the eyes absent (EYA) family of proteins. The encoded<br/>protein may play a role in the developing kidney, branchial arches, eye, and ear. Mutations of<br/>this gene have been associated with branchiootorenal dysplasia syndrome, branchiootic<br/>syndrome, and sporadic cases of congenital cataracts and ocular anterior segment<br/>anomalies. A similar protein in mice can act as a transcriptional activator. Alternatively<br/>spliced transcript variants have been identified for this gene. [provided by RefSeq, Dec 2013]
