	Argonaute 2 (AGO2) (NM_012154) Human Tagged ORF Clone Lentiviral Particle – RC218078L2V
MW:	97 kDa
Gene Summary:	This gene encodes a member of the Argonaute family of proteins which play a role in RNA interference. The encoded protein is highly basic, and contains a PAZ domain and a PIWI domain. It may interact with dicer1 and play a role in short-interfering-RNA-mediated gene silencing. Multiple transcript variants encoding different isoforms have been found for this gene.
