VSIG4 (NM 001100431) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: VSIG4 (NM_001100431) Human Tagged ORF Clone Lentiviral Particle

Symbol:

CRIg; Z39IG Synonyms: **Mammalian Cell**

Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK

NM 001100431 ACCN:

ORF Size: 915 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC218106).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: NM 001100431.1

RefSeq Size: 1586 bp RefSeq ORF: 918 bp Locus ID: 11326 **UniProt ID:** Q9Y279

Cytogenetics: Xq12

Protein Families: Transmembrane

MW: 33.7 kDa

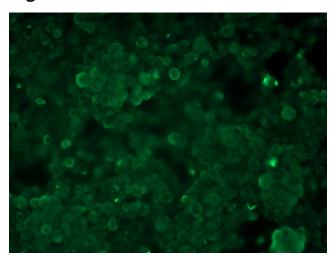

Gene Summary:

This gene encodes a v-set and immunoglobulin-domain containing protein that is structurally related to the B7 family of immune regulatory proteins. The encoded protein may be a negative regulator of T-cell responses. This protein is also a receptor for the complement component 3 fragments C3b and iC3b. Alternate splicing results in multiple transcript variants. [provided by RefSeq, May 2010]

Product images:

[RC218106L3] was used to prepare Lentiviral particles using [TR30037] packaging kit. HEK293T cells were transduced with RC218106L3V particle to overexpress human VSIG4-Myc-DDK fusion protein.
