Secretin (SCT) (NM 021920) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Secretin (SCT) (NM_021920) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: Secretin

Mammalian Cell

Selection:

None

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide

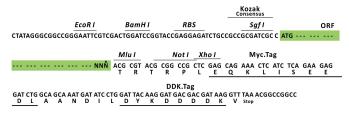

The ORF insert of this clone is exactly the same as(RC218129).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_021920

ORF Size: 363 bp

Secretin (SCT) (NM_021920) Human Tagged Lenti ORF Clone - RC218129L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 021920.2</u>

RefSeq Size: 514 bp
RefSeq ORF: 366 bp
Locus ID: 6343
UniProt ID: P09683

Cytogenetics: 11p15.5

MW: 12.8 kDa

Protein Families:

Gene Summary: This gene encodes a member of the glucagon family of peptides. The encoded preproprotein

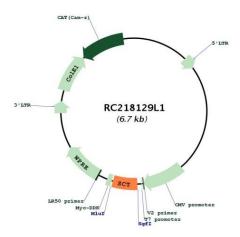

is secreted by endocrine S cells in the proximal small intestinal mucosa as a prohormone, then proteolytically processed to generate the mature peptide hormone. The release of this active peptide hormone is stimulated by either fatty acids or acidic pH in the duodenum. This hormone stimulates the secretion of bile and bicarbonate in the duodenum, pancreatic and

biliary ducts. [provided by RefSeq, Feb 2016]
