CCDC16 (ZNF830) (NM_052857) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CCDC16 (ZNF830) (NM 052857) Human Tagged Lenti ORF Clone

Tag: Myc-DDK Symbol: CCDC16

CCDC16; OMCG1 Synonyms:

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

Sequence:

The ORF insert of this clone is exactly the same as(RC218305).

Restriction Sites:

Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_052857

ORF Size: 1116 bp

CCDC16 (ZNF830) (NM_052857) Human Tagged Lenti ORF Clone - RC218305L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: NM 052857.2

 RefSeq Size:
 1646 bp

 RefSeq ORF:
 1119 bp

 Locus ID:
 91603

 UniProt ID:
 Q96NB3

 Cytogenetics:
 17q12

Domains: ZnF U1

MW: 41.8 kDa

Gene Summary: May play a role in pre-mRNA splicing as component of the spliceosome (PubMed:25599396).

Acts as an important regulator of the cell cycle that participates in the maintenance of genome integrity. During cell cycle progression in embryonic fibroblast, prevents replication fork collapse, double-strand break formation and cell cycle checkpoint activation. Controls mitotic cell cycle progression and cell survival in rapidly proliferating intestinal epithelium and embryonic stem cells. During the embryo preimplantation, controls different aspects of M phase. During early oocyte growth, plays a role in oocyte survival by preventing chromosomal

breaks formation, activation of TP63 and reduction of transcription (By similarity).

[UniProtKB/Swiss-Prot Function]
