Product datasheet for RC218305L3V

CCDC16 (ZNF830) (NM_052857) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	CCDC16 (ZNF830) (NM_052857) Human Tagged ORF Clone Lentiviral Particle
Symbol:	CCDC16
Synonyms:	CCDC16; OMCG1
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
Tag:	Myc-DDK
ACCN:	NM_052857
ORF Size:	1116 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC218305).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 052857.2</u>
RefSeq Size:	1646 bp
RefSeq ORF:	1119 bp
Locus ID:	91603
UniProt ID:	<u>Q96NB3</u>
Cytogenetics:	17q12
Domains:	ZnF_U1
MW:	41.8 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

CCDC16 (ZNF830) (NM_052857) Human Tagged ORF Clone Lentiviral Particle – RC218305L3V

Gene Summary:May play a role in pre-mRNA splicing as component of the spliceosome (PubMed:25599396).
Acts as an important regulator of the cell cycle that participates in the maintenance of
genome integrity. During cell cycle progression in embryonic fibroblast, prevents replication
fork collapse, double-strand break formation and cell cycle checkpoint activation. Controls
mitotic cell cycle progression and cell survival in rapidly proliferating intestinal epithelium and
embryonic stem cells. During the embryo preimplantation, controls different aspects of M
phase. During early oocyte growth, plays a role in oocyte survival by preventing chromosomal
breaks formation, activation of TP63 and reduction of transcription (By similarity).
[UniProtKB/Swiss-Prot Function]
