OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

## ALAS2 (NM\_001037968) Human Tagged ORF Clone Lentiviral Particle - RC218323L3V

**Protein Pathways:** Glycine, serine and threonine metabolism, Metabolic pathways, Porphyrin and chlorophyll

metabolism

MW: 63.49 kDa

**Gene Summary:** The product of this gene specifies an erythroid-specific mitochondrially located enzyme. The

encoded protein catalyzes the first step in the heme biosynthetic pathway. Defects in this gene cause X-linked pyridoxine-responsive sideroblastic anemia. Alternatively spliced transcript variants encoding different isoforms have been identified. [provided by RefSeq, Jul
