### SNRPC (NM\_003093) Human Tagged Lenti ORF Clone

**Product data:** 

**Product Type:** Expression Plasmids

**Product Name:** SNRPC (NM\_003093) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: SNRPC

Synonyms: U1C; Yhc1

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

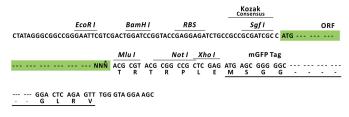

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC218418).

Sgfl-Mlul

Sequence:

Restriction Sites: Cloning Scheme:

<sup>\*</sup> The last codon before the Stop codon of the ORF.

**ACCN:** NM\_003093

ORF Size: 477 bp

#### SNRPC (NM\_003093) Human Tagged Lenti ORF Clone - RC218418L4

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>NM 003093.1</u>

 RefSeq Size:
 733 bp

 RefSeq ORF:
 480 bp

 Locus ID:
 6631

 UniProt ID:
 P09234

Cytogenetics: 6p21.31

Domains: ZnF U1

**Protein Families:** Stem cell - Pluripotency

Protein Pathways: Spliceosome

**MW:** 17.2 kDa

**Gene Summary:** This gene encodes one of the specific protein components of the U1 small nuclear

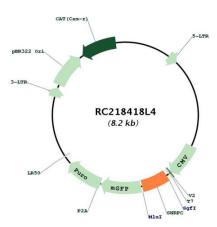

ribonucleoprotein (snRNP) particle required for the formation of the spliceosome. The encoded protein participates in the processing of nuclear precursor messenger RNA splicing.

snRNP particles are attacked by autoantibodies frequently produced by patients with

connective tissue diseases. The genome contains several pseudogenes of this functional gene. Alternative splicing results in a non-coding transcript variant.[provided by RefSeq, Oct 2009]
