<b>ORIGENE</b> Decorin (DCN) (NM_133506) Human Tagged ORF Clone Lentiviral Particle – RC218427L4V	
Protein Pathways:	TGF-beta signaling pathway
MW:	17.4 kDa
Gene Summary:	This gene encodes a member of the small leucine-rich proteoglycan family of proteins. Alternative splicing results in multiple transcript variants, at least one of which encodes a preproprotein that is proteolytically processed to generate the mature protein. This protein plays a role in collagen fibril assembly. Binding of this protein to multiple cell surface receptors mediates its role in tumor suppression, including a stimulatory effect on autophagy and inflammation and an inhibitory effect on angiogenesis and tumorigenesis. This gene and the related gene biglycan are thought to be the result of a gene duplication. Mutations in this gene are associated with congenital stromal corneal dystrophy in human patients.
