CCRL2 (NM_003965) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: CCRL2 (NM_003965) Human Tagged ORF Clone Lentiviral Particle

Symbol: CCRL2

Synonyms: ACKR5; CKRX; CRAM; CRAM-A; CRAM-B; HCR

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK
ACCN: NM 003965

ORF Size: 1032 bp

ORF Nucleotide

Sequence:

The ORF insert of this clone is exactly the same as(RC218484).

OTI Disclaimer: Due to the inherent nature of this plasmid, standard methods to replicate additional

amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA.

Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence

verification at a reduced cost. Please contact our customer care team at

<u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 003965.4</u>

RefSeq Size: 1745 bp RefSeq ORF: 1035 bp

CCRL2 (NM_003965) Human Tagged ORF Clone Lentiviral Particle - RC218484L3V

Locus ID: 9034

 UniProt ID:
 000421

 Cytogenetics:
 3p21.31

 Domains:
 7tm_1

Protein Families: Druggable Genome, GPCR, Transmembrane

MW: 39.5 kDa

Gene Summary: This gene encodes a chemokine receptor like protein, which is predicted to be a seven

transmembrane protein and most closely related to CCR1. Chemokines and their receptors mediated signal transduction are critical for the recruitment of effector immune cells to the site of inflammation. This gene is expressed at high levels in primary neutrophils and primary monocytes, and is further upregulated on neutrophil activation and during monocyte to macrophage differentiation. The function of this gene is unknown. This gene is mapped to the region where the chemokine receptor gene cluster is located. [provided by RefSeq, Jul 2008]
