# Product datasheet for RC218519L1

## Estrogen Receptor beta (ESR2) (NM\_001437) Human Tagged Lenti ORF Clone

### **Product data:**

Product Type:	Expression Plasmids
Product Name:	Estrogen Receptor beta (ESR2) (NM_001437) Human Tagged Lenti ORF Clone
Tag:	Myc-DDK
Symbol:	Estrogen Receptor beta
Synonyms:	ER-BETA; Erb; ESR-BETA; ESRB; ESTRB; NR3A2; ODG8
Mammalian Cell Selection:	None
Vector:	pLenti-C-Myc-DDK (PS100064)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC218519).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgf I         ORF         Mlu I            GCG ATC GC C         ATG//         NNÑ         ACG CGT

ACCN: ORF Size: NM\_001437 1590 bp

	en Receptor beta (ESR2) (NM_001437) Human Tagged Lenti ORF Clone – RC218519L1
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>
RefSeq:	<u>NM 001437.1</u>
RefSeq Size:	2011 bp
RefSeq ORF:	1593 bp
Locus ID:	2100
UniProt ID:	<u>Q92731</u>
Cytogenetics:	14q23.2-q23.3
Domains:	HOLI, zf-C4
Protein Families:	Druggable Genome, Nuclear Hormone Receptor, Transcription Factors
MW:	59 kDa

#### Strogen Receptor beta (ESR2) (NM\_001437) Human Tagged Lenti ORF Clone – RC218519L1

Gene Summary:This gene encodes a member of the family of estrogen receptors and superfamily of nuclear<br/>receptor transcription factors. The gene product contains an N-terminal DNA binding domain<br/>and C-terminal ligand binding domain and is localized to the nucleus, cytoplasm, and<br/>mitochondria. Upon binding to 17beta-estradiol or related ligands, the encoded protein<br/>forms homo- or hetero-dimers that interact with specific DNA sequences to activate<br/>transcription. Some isoforms dominantly inhibit the activity of other estrogen receptor family<br/>members. Several alternatively spliced transcript variants of this gene have been described,<br/>but the full-length nature of some of these variants has not been fully characterized.<br/>[provided by RefSeq, Jul 2008]
