

Product datasheet for RC218582L1

NR2C1 (NM_003297) Human Tagged Lenti ORF Clone

Product data:

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids
Product Name:	NR2C1 (NM_003297) Human Tagged Lenti ORF Clone
Tag:	Myc-DDK
Symbol:	NR2C1
Synonyms:	TR2
Mammalian Cell Selection:	None
Vector:	pLenti-C-Myc-DDK (PS100064)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC218582).
Restriction Sites:	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	GCG ATC GCC ATG// NNN ACG CGT

* The last codon before the Stop codon of the ORF.

ACCN: ORF Size: NM_003297 1809 bp

	R2C1 (NM_003297) Human Tagged Lenti ORF Clone – RC218582L1
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Met	 hod: 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 003297.3</u>
RefSeq Size:	4068 bp
RefSeq ORF:	1812 bp
Locus ID:	7181
UniProt ID:	<u>P13056</u>
Cytogenetics:	12q22
Domains:	HOLI, zf-C4
Protein Families:	Druggable Genome, Nuclear Hormone Receptor, Transcription Factors
MW:	67.8 kDa

Scherken State Content and Con

Gene Summary:This gene encodes a nuclear hormone receptor characterized by a highly conserved DNA
binding domain (DBD), a variable hinge region, and a carboxy-terminal ligand binding domain
(LBD) that is typical for all members of the steroid/thyroid hormone receptor superfamily.
This protein also belongs to a large family of ligand-inducible transcription factors that
regulate gene expression by binding to specific DNA sequences within promoters of target
genes. Multiple alternatively spliced transcript variants have been described, but the full-
length nature of some of these variants has not been determined. [provided by RefSeq, Jul
2008]
