Collagen VI (COL6A2) (NM 058175) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: Collagen VI (COL6A2) (NM_058175) Human Tagged ORF Clone Lentiviral Particle

Symbol:

BTHLM1; PP3610; UCMD1 Synonyms:

Mammalian Cell

Selection:

ACCN:

None

Vector: pLenti-C-Myc-DDK (PS100064)

Myc-DDK Tag:

NM 058175 **ORF Size:** 2484 bp

ORF Nucleotide

Sequence:

The ORF insert of this clone is exactly the same as(RC218757).

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: NM 058175.2, NP 478055.2

RefSeq Size: 3461 bp RefSeq ORF: 2487 bp Locus ID: 1292 **UniProt ID:** P12110 Cytogenetics: 21q22.3

Protein Families: Secreted Protein

Protein Pathways: ECM-receptor interaction, Focal adhesion

MW: 87.3 kDa

Gene Summary:

This gene encodes one of the three alpha chains of type VI collagen, a beaded filament collagen found in most connective tissues. The product of this gene contains several domains similar to von Willebrand Factor type A domains. These domains have been shown to bind extracellular matrix proteins, an interaction that explains the importance of this collagen in organizing matrix components. Mutations in this gene are associated with Bethlem myopathy and Ullrich scleroatonic muscular dystrophy. Three transcript variants have been identified for this gene. [provided by RefSeq, Jul 2008]
