## Cell adhesion molecule 2 (CADM2) (NM 153184) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** Cell adhesion molecule 2 (CADM2) (NM\_153184) Human Tagged ORF Clone Lentiviral Particle

Symbol: Cell adhesion molecule 2

Synonyms: IGSF4D; Necl-3; NECL3; SynCAM 2; synCAM2

**Mammalian Cell** 

Selection:

None

**Vector:** pLenti-C-mGFP (PS100071)

Tag: mGFP

**ACCN:** NM\_153184 **ORF Size:** 1311 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC218787).

Sequence:
OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 153184.2</u>

 RefSeq Size:
 3347 bp

 RefSeq ORF:
 1314 bp

 Locus ID:
 253559

 UniProt ID:
 Q8N3J6

 Cytogenetics:
 3p12.1

**Domains:** ig, IGc2, IG

**Protein Families:** Druggable Genome, Transmembrane

Cell adhesion molecule 2 (CADM2) (NM\_153184) Human Tagged ORF Clone Lentiviral Particle – RC218787L2V

**MW:** 47.6 kDa

**Gene Summary:** 

This gene encodes a member of the synaptic cell adhesion molecule 1 (SynCAM) family which belongs to the immunoglobulin (Ig) superfamily. The encoded protein has three Ig-like domains and a cytosolic protein 4.1 binding site near the C-terminus. Proteins belonging to the protein 4.1 family crosslink spectrin and interact with other cytoskeletal proteins. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Feb 2012]
