BCKDHB (NM_000056) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: BCKDHB (NM_000056) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: BCKDHB

Synonyms: BCKDE1B; BCKDH E1-beta; E1B

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC218846).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_000056

ORF Size: 1176 bp

BCKDHB (NM_000056) Human Tagged Lenti ORF Clone - RC218846L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000056.2</u>

RefSeq Size: 1552 bp RefSeq ORF: 1179 bp

Locus ID: 594

 UniProt ID:
 P21953

 Cytogenetics:
 6q14.1

Domains: transket pyr, transketolase C

Protein Pathways: Metabolic pathways, Valine, leucine and isoleucine degradation

MW: 43.12 kDa

Gene Summary: This gene encodes the E1 beta subunit of branched-chain keto acid dehydrogenase, which is a

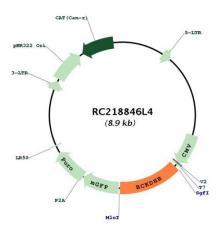

multienzyme complex associated with the inner membrane of mitochondria. This enzyme complex functions in the catabolism of branched-chain amino acids. Mutations in this gene

have been associated with maple syrup urine disease (MSUD), type 1B, a disease characterized by a maple syrup odor to the urine in addition to mental and physical retardation and feeding problems. Alternative splicing at this locus results in multiple

transcript variants. [provided by RefSeq, Jan 2016]
