GGT5 (NM_001099782) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: GGT5 (NM_001099782) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: GGT5

Synonyms: GGL; GGT-REL; GGT 5; GGTLA1

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC218872).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_001099782

ORF Size: 1662 bp

GGT5 (NM_001099782) Human Tagged Lenti ORF Clone - RC218872L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001099782.1</u>, <u>NP 001093252.1</u>

22q11.23

 RefSeq Size:
 2401 bp

 RefSeq ORF:
 1665 bp

 Locus ID:
 2687

 UniProt ID:
 P36269

Cytogenetics:

Protein Families: Protease, Transmembrane

Protein Pathways: Arachidonic acid metabolism, Cyanoamino acid metabolism, Glutathione metabolism,

Metabolic pathways, Selenoamino acid metabolism, Taurine and hypotaurine metabolism

MW: 58.8 kDa

Gene Summary: This gene is a member of the gamma-glutamyl transpeptidase gene family, and some reports

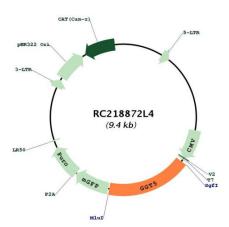

indicate that it is capable of cleaving the gamma-glutamyl moiety of glutathione. The protein encoded by this gene is synthesized as a single, catalytically-inactive polypeptide, that is processed post-transcriptionally to form a heavy and light subunit, with the catalytic activity contained within the small subunit. The encoded enzyme is able to convert leukotriene C4 to leukotriene D4, but appears to have distinct substrate specificity compared to gamma-

glutamyl transpeptidase. Alternative splicing results in multiple transcript variants encoding

different isoforms. [provided by RefSeq, Oct 2014]
