	Syntenin 2 (SDCBP2) (NM_015685) Human Tagged ORF Clone Lentiviral Particle – RC218898L3V
Gene Summary:	The protein encoded by this gene contains two class II PDZ domains. PDZ domains facilitate
	protein-protein interactions by binding to the cytoplasmic C-terminus of transmembrane
	proteins, and PDZ-containing proteins mediate cell signaling and the organization of protein
	complexes. The encoded protein binds to phosphatidylinositol 4, 5-bisphosphate (PIP2) and

complexes. The encoded protein binds to phosphatidylinositol 4, 5-bisphosphate (PIP2) and plays a role in nuclear PIP2 organization and cell division. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. Read-through transcription also exists between this gene and the upstream FKBP1A (FK506 binding protein 1A, 12kDa) gene, as represented in GeneID:100528031. [provided by RefSeq, Sep 2011]
