

## Product datasheet for RC219003L4

### Estrogen induced gene 121 protein (KIAA1324) (NM\_020775) Human Tagged Lenti ORF Clone

#### Product data:

|                           |   |
|---------------------------|---|
| Product Type:             | Expression Plasmids   |
| Product Name:             | Estrogen induced gene 121 protein (KIAA1324) (NM_020775) Human Tagged Lenti ORF Clone |
| Tag:                      | mGFP  |
| Symbol:                   | Estrogen induced gene 121 protein   |
| Synonyms:                 | EIG121; KIAA1324  |
| Mammalian Cell Selection: | Puromycin   |
| Vector:                   | pLenti-C-mGFP-P2A-Puro (PS100093)   |
| E. coli Selection:        | Chloramphenicol (34 ug/mL)  |
| ORF Nucleotide Sequence:  | The ORF insert of this clone is exactly the same as(RC219003).                        |
| Restriction Sites:        | SgfI-MluI   |
| Cloning Scheme:           |   |

Cloning sites used for ORF Shuttling:

\* The last codon before the Stop codon of the ORF.

|           |           |
|-----------|-----------|
| ACCN:     | NM_020775 |
| ORF Size: | 3039 bp   |

|-------------------------------|---|
| <b>OTI Disclaimer:</b>        | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <a href="#">More info</a>  |
| <b>OTI Annotation:</b>        | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| <b>Components:</b>            | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).  |
| <b>Reconstitution Method:</b> | <ol style="list-style-type: none"><li>1. Centrifuge at 5,000xg for 5min.</li><li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li><li>3. Close the tube and incubate for 10 minutes at room temperature.</li><li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li><li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li></ol> |
| <b>RefSeq:</b>                | <a href="#">NM_020775.4</a> , <a href="#">NP_065826.2</a>   |
| <b>RefSeq Size:</b>           | 3428 bp   |
| <b>RefSeq ORF:</b>            | 3042 bp   |
| <b>Locus ID:</b>              | 57535   |
| <b>UniProt ID:</b>            | <a href="#">Q6UXG2</a>  |
| <b>Cytogenetics:</b>          | 1p13.3  |
| <b>Protein Families:</b>      | Transmembrane   |
| <b>MW:</b>                    | 111.2 kDa   |
| <b>Gene Summary:</b>          | Expression of this gene is induced by estrogen and the encoded protein has been characterized as a transmembrane protein. The encoded protein has been found in to correlate with survival in certain carcinomas (PMID: 21102415) and may be important for cellular response to stress (PMID: 21072319). Alternative splicing results in multiple transcript variants. [provided by RefSeq, May 2012]   |
