## Kallikrein 14 (KLK14) (NM 022046) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

Product Name: Kallikrein 14 (KLK14) (NM 022046) Human Tagged ORF Clone Lentiviral Particle

Symbol: Kallikrein 14

Synonyms: KLK-L6

Mammalian Cell None

Selection: Vector:

pLenti-C-mGFP (PS100071)

Tag: mGFP

**ACCN:** NM 022046

ORF Size: 801 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC219028).

OTI Disclaimer:

Cytogenetics:

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 022046.4, NP 071329.2

 RefSeq Size:
 1133 bp

 RefSeq ORF:
 756 bp

 Locus ID:
 43847

 UniProt ID:
 Q9P0G3

**Protein Families:** Druggable Genome, Protease, Secreted Protein

19q13.41

**MW:** 29.1 kDa

## **Gene Summary:**

This gene encodes a member of the kallikrein subfamily of serine proteases that have diverse physiological functions such as regulation of blood pressure and desquamation. The altered expression of this gene is implicated in the progression of different cancers including breast and prostate tumors. The encoded protein is a precursor that is proteolytically processed to generate the functional enzyme. This gene is one of the fifteen kallikrein subfamily members located in a cluster on chromosome 19. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jul 2015]
