| Product Type:                | Expression Plasmids   |
|------------------------------|---|
| Product Name:                | BACE1 (NM_138973) Human Tagged Lenti ORF Clone  |
| Tag:                         | Myc-DDK   |
| Symbol:                      | BACE1   |
| Synonyms:                    | ASP2; BACE; HSPC104   |
| Mammalian Cell<br>Selection: | Puromycin   |
| Vector:                      | pLenti-C-Myc-DDK-P2A-Puro (PS100092)  |
| E. coli Selection:           | Chloramphenicol (34 ug/mL)  |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC219054).                            |
| <b>Restriction Sites:</b>    | Sgfl-Mlul   |
| Cloning Scheme:              |   |
|                              | Cloning sites used for ORF Shuttling:   |
|                              |   |
|                              | Sgf I         ORF         Mlu I            GCG ATC GCC         ATG // NNN         ACG CGT |

ACCN: ORF Size: NM\_138973 1296 bp

|                      | E1 (NM_138973) Human Tagged Lenti ORF Clone – RC219054L3   |
|----------------------|--|
| OTI Disclaimer:      | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>  |
| OTI Annotation:      | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.   |
| Components:          | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).   |
| Reconstitution Metho | <ul> <li>d: 1. Centrifuge at 5,000xg for 5min.</li> <li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>3. Close the tube and incubate for 10 minutes at room temperature.</li> <li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ul>   |
| RefSeq:              | <u>NM 138973.2, NP 620429.1</u>  |
| RefSeq Size:         | 5643 bp  |
| RefSeq ORF:          | 1299 bp  |
| Locus ID:            | 23621  |
| UniProt ID:          | <u>P56817</u>  |
| Cytogenetics:        | 11q23.3  |
| Domains:             | asp  |
| Protein Families:    | Druggable Genome, Protease, Transmembrane  |
| Protein Pathways:    | Alzheimer's disease  |
| MW:                  | 43.4 kDa   |
| Gene Summary:        | This gene encodes a member of the peptidase A1 family of aspartic proteases. Alternative splicing results in multiple transcript variants, at least one of which encodes a preproprotein that is proteolytically processed to generate the mature protease. This transmembrane protease catalyzes the first step in the formation of amyloid beta peptide from amyloid precursor protein. Amyloid beta peptides are the main constituent of amyloid beta plaques, which accumulate in the brains of human Alzheimer's disease patients. [provided by RefSeq, |
