Gene Summary:This gene encodes a member of the sorting nexin family. Members of this family contain a<br/>phox (PX) domain, which is a phosphoinositide binding domain, and are involved in<br/>intracellular trafficking. This protein does not contain a coiled coil region, like some family<br/>members, but contains a SH3 domain. Multiple transcript variants encoding different<br/>isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
