## USP48 (NM\_001032730) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** USP48 (NM\_001032730) Human Tagged ORF Clone Lentiviral Particle

Symbol: USP48

Synonyms: RAP1GA1; USP31

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK

**ACCN:** NM\_001032730

ORF Size: 1455 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC219163).

Sequence:
OTI Disclaimer:

Cytogenetics:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 001032730.1

 RefSeq Size:
 2421 bp

 RefSeq ORF:
 1458 bp

 Locus ID:
 84196

 UniProt ID:
 Q86UV5

**Protein Families:** Druggable Genome, Protease, Transmembrane

1p36.12

**MW:** 56 kDa

## **Gene Summary:**

This gene encodes a protein containing domains that associate it with the peptidase family C19, also known as family 2 of ubiquitin carboxyl-terminal hydrolases. Family members function as deubiquitinating enzymes, recognizing and hydrolyzing the peptide bond at the C-terminal glycine of ubiquitin. Enzymes in peptidase family C19 are involved in the processing of poly-ubiquitin precursors as well as that of ubiquitinated proteins. Alternate transcriptional splice variants, encoding different isoforms, have been characterized. [provided by RefSeq, Jul 2008]
