GRIGENE TRAF5 (NM_004619) Human Tagged ORF Clone Lentiviral Particle – RC219243L4V	
Protein Pathways:	Pathways in cancer, Small cell lung cancer
MW:	64.4 kDa
Gene Summary:	The scaffold protein encoded by this gene is a member of the tumor necrosis factor receptor- associated factor (TRAF) protein family and contains a meprin and TRAF homology (MATH) domain, a RING-type zinc finger, and two TRAF-type zinc fingers. TRAF proteins are associated with, and mediate signal transduction from members of the TNF receptor superfamily. This protein is one of the components of a multiple protein complex which binds to tumor necrosis factor (TNF) receptor cytoplasmic domains and mediates TNF-induced activation. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jan 2016]
