| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |

Gene Summary:This gene lies within the major histocompatibility complex class I region on chromosome 6.Studies of a similar rat protein suggest that this gene encodes a protein that plays a role in<br/>an early phase of synaptic plasticity. Multiple transcript variants encoding different isoforms<br/>have been found for this gene. [provided by RefSeq, Jul 2008]
