

Product datasheet for RC219349L3

TAZ (NM_181312) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: TAZ (NM_181312) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: TAZ

Synonyms: BTHS; CMD3A; EFE; EFE2; G4.5; LVNCX; TAZ; Taz1

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC219349).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_181312

ORF Size: 834 bp

TAZ (NM_181312) Human Tagged Lenti ORF Clone - RC219349L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 181312.1</u>

RefSeq Size: 1862 bp
RefSeq ORF: 837 bp
Locus ID: 6901

UniProt ID: Q16635

Cytogenetics: Xq28

Protein Families: ES Cell Differentiation/IPS, Transmembrane

MW: 31.6 kDa

Gene Summary: This gene encodes a protein that is expressed at high levels in cardiac and skeletal muscle.

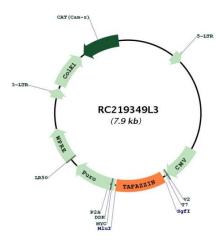

Mutations in this gene have been associated with a number of clinical disorders including Barth syndrome, dilated cardiomyopathy (DCM), hypertrophic DCM, endocardial

fibroelastosis, and left ventricular noncompaction (LVNC). Multiple transcript variants encoding different isoforms have been described. A long form and a short form of each of these isoforms is produced; the short form lacks a hydrophobic leader sequence and may exist as a cytoplasmic protein rather than being membrane-bound. Other alternatively spliced transcripts have been described but the full-length nature of all these transcripts is

not known. [provided by RefSeq, Jul 2008]
