AGXT2 (NM_031900) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: AGXT2 (NM_031900) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: AGXT2

Synonyms: AGT2; BAIBA; DAIBAT

Mammalian Cell None

Selection:

Vector:pLenti-C-mGFP (PS100071)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC219357).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_031900

ORF Size: 1542 bp

AGXT2 (NM_031900) Human Tagged Lenti ORF Clone - RC219357L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 031900.1</u>

 RefSeq Size:
 2165 bp

 RefSeq ORF:
 1545 bp

 Locus ID:
 64902

 UniProt ID:
 Q9BYV1

Cytogenetics:

Protein Families: Druggable Genome

Protein Pathways: Alanine, aspartate and glutamate metabolism

5p13.2

MW: 52.4 kDa

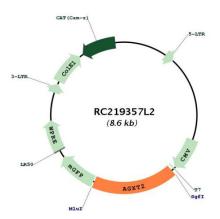

Gene Summary: The protein encoded by this gene is a class III pyridoxal-phosphate-dependent mitochondrial

aminotransferase. It catalyzes the conversion of glyoxylate to glycine using L-alanine as the amino donor. It is an important regulator of methylarginines and is involved in the control of blood pressure in kidney. Polymorphisms in this gene affect methylarginine and beta-aminoisobutyrate metabolism, and are associated with carotid atherosclerosis. Alternative

splicing results in multiple transcript variants. [provided by RefSeq, Apr 2015]
