Synapsin III (SYN3) (NM_003490) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Synapsin III (SYN3) (NM_003490) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: Synapsin III

Mammalian Cell None

Selection:

Vector: pLenti-C-Myc-DDK (PS100064)

E. coli Selection: Chloramphenicol (34 ug/mL)

Sequence:

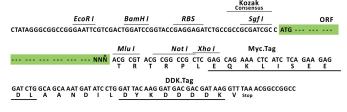

The ORF insert of this clone is exactly the same as(RC219395).

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

ORF Nucleotide

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_003490

ORF Size: 1740 bp

Synapsin III (SYN3) (NM_003490) Human Tagged Lenti ORF Clone - RC219395L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 003490.2</u>

RefSeq Size: 2918 bp
RefSeq ORF: 1743 bp
Locus ID: 8224

 UniProt ID:
 O14994

 Cytogenetics:
 22q12.3

Protein Families: Secreted Protein

MW: 63.1 kDa

Gene Summary: This gene is a member of the synapsin gene family. Synapsins encode neuronal

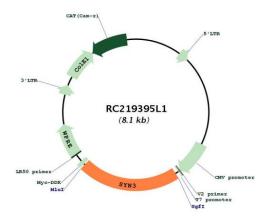

phosphoproteins which associate with the cytoplasmic surface of synaptic vesicles. Family members are characterized by common protein domains, and they are implicated in synaptogenesis and the modulation of neurotransmitter release, suggesting a potential role in several neuropsychiatric diseases. The protein encoded by this gene shares the synapsin family domain model, with domains A, C, and E exhibiting the highest degree of conservation. The protein contains a unique domain J, located between domains C and E. Based on this gene's localization to 22q12.3, a possible schizophrenia susceptibility locus, and the established neurobiological roles of the synapsins, this family member may represent a

candidate gene for schizophrenia. The TIMP3 gene is located within an intron of this gene and is transcribed in the opposite direction. Alternative splicing of this gene results in multiple

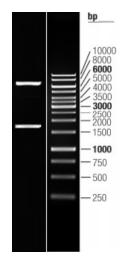

splice variants that encode different isoforms. [provided by RefSeq, Oct 2008]
