OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Gene Summary:This gene encodes a nuclear-localized E3 ubiquitin ligase. The encoded protein can promote<br/>tumor formation by targeting tumor suppressor proteins, such as p53, for proteasomal<br/>degradation. This gene is itself transcriptionally-regulated by p53. Overexpression or<br/>amplification of this locus is detected in a variety of different cancers. There is a pseudogene<br/>for this gene on chromosome 2. Alternative splicing results in a multitude of transcript<br/>variants, many of which may be expressed only in tumor cells. [provided by RefSeq, Jun 2013]
