

Product datasheet for RC219655

CD151 (NM_139029) Human Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CD151 (NM_139029) Human Tagged ORF Clone

Tag: Myc-DDK
Symbol: CD151

Synonyms: GP27; MER2; PETA-3; RAPH; SFA1; TSPAN24

Mammalian Cell Neo

Selection:

Neomycin

Vector:pCMV6-Entry (PS100001)E. coli Selection:Kanamycin (25 ug/mL)ORF Nucleotide>RC219655 ORF sequence

Chromatograms: https://cdn.origene.com/chromatograms/mk6614 g04.zip

Restriction Sites: Sgfl-Rsrll

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_139029

ORF Size: 759 bp

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

- 1. Centrifuge at 5,000xg for 5min.
- 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
- 3. Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: <u>NM 139029.1</u>, <u>NP 620598.1</u>

 UniProt ID:
 P48509

 Cytogenetics:
 11p15.5

Protein Families: Druggable Genome, Transmembrane

MW: 28.3 kDa

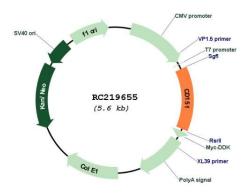

Gene Summary: The protein encoded by this gene is a member of the transmembrane 4 superfamily, also

known as the tetraspanin family. Most of these members are cell-surface proteins that are characterized by the presence of four hydrophobic domains. The proteins mediate signal transduction events that play a role in the regulation of cell development, activation, growth and motility. This encoded protein is a cell surface glycoprotein that is known to complex with integrins and other transmembrane 4 superfamily proteins. It is involved in cellular processes including cell adhesion and may regulate integrin trafficking and/or function. This protein enhances cell motility, invasion and metastasis of cancer cells. Multiple alternatively spliced transcript variants that encode the same protein have been described for this gene. [provided

by RefSeq, Jul 2008]
