EYA1 (NM 000503) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: EYA1 (NM_000503) Human Tagged ORF Clone Lentiviral Particle

Symbol:

BOP; BOR; BOS1; OFC1 Synonyms:

Mammalian Cell

Selection:

None

Vector: pLenti-C-Myc-DDK (PS100064)

Myc-DDK Tag: NM 000503 ACCN:

ORF Size: 1776 bp

ORF Nucleotide

Sequence:

The ORF insert of this clone is exactly the same as(RC219782).

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: NM 000503.3

RefSeq Size: 4326 bp RefSeq ORF: 1779 bp Locus ID: 2138 **UniProt ID:** Q99502 Cytogenetics: 8q13.3 **Domains:**

Protein Families: Druggable Genome, Phosphatase, Transcription Factors

Hydrolase

ORÏGENE

MW: 64.4 kDa

Gene Summary: This gene encodes a member of the eyes absent (EYA) family of proteins. The encoded

protein may play a role in the developing kidney, branchial arches, eye, and ear. Mutations of this gene have been associated with branchiootorenal dysplasia syndrome, branchiootic syndrome, and sporadic cases of congenital cataracts and ocular anterior segment anomalies. A similar protein in mice can act as a transcriptional activator. Alternatively spliced transcript variants have been identified for this gene. [provided by RefSeq, Dec 2013]
