PCSK9 (NM_174936) Human Tagged Lenti ORF Clone – RC220000L4	
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Metho	 d: 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 174936.2</u>
RefSeq Size:	3636 bp
RefSeq ORF:	2079 bp
Locus ID:	255738
UniProt ID:	Q8NBP7
Cytogenetics:	1p32.3

Science PCSK9 (NM_174936) Human Tagged Lenti ORF Clone – RC220000L4

Gene Summary:This gene encodes a member of the subtilisin-like proprotein convertase family, which
includes proteases that process protein and peptide precursors trafficking through regulated
or constitutive branches of the secretory pathway. The encoded protein undergoes an
autocatalytic processing event with its prosegment in the ER and is constitutively secreted as
an inactive protease into the extracellular matrix and trans-Golgi network. It is expressed in
liver, intestine and kidney tissues and escorts specific receptors for lysosomal degradation. It
plays a role in cholesterol and fatty acid metabolism. Mutations in this gene have been
associated with autosomal dominant familial hypercholesterolemia. Alternative splicing
results in multiple transcript variants. [provided by RefSeq, Feb 2014]
