## Galectin 8 (LGALS8) (NM\_006499) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** Galectin 8 (LGALS8) (NM\_006499) Human Tagged ORF Clone Lentiviral Particle

Symbol: Galectin 8

**Synonyms:** Gal-8; PCTA-1; PCTA1; Po66-CBP

**Mammalian Cell** 

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK
ACCN: NM 006499

ORF Size: 1077 bp

**ORF Nucleotide** 

OTI Disclaimer:

The ORF insert of this clone is exactly the same as(RC220102).

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 006499.3

 RefSeq Size:
 2996 bp

 RefSeq ORF:
 1080 bp

 Locus ID:
 3964

 UniProt ID:
 000214

 Cytogenetics:
 1q43

**Domains:** Gal-bind lectin

MW: 40.2 kDa

## **Gene Summary:**

This gene encodes a member of the galectin family. Galectins are beta-galactoside-binding animal lectins with conserved carbohydrate recognition domains. The galectins have been implicated in many essential functions including development, differentiation, cell-cell adhesion, cell-matrix interaction, growth regulation, apoptosis, and RNA splicing. This gene is widely expressed in tumoral tissues and seems to be involved in integrin-like cell interactions. Alternatively spliced transcript variants encoding different isoforms have been identified. [provided by RefSeq, Jul 2008]
