C6ORF173 (CENPW) (NM_001012507) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: C6ORF173 (CENPW) (NM 001012507) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: C6ORF173

Synonyms: C6orf173; CENP-W; CUG2

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide

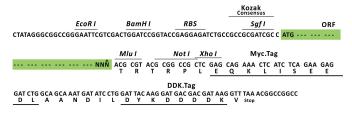

The ORF insert of this clone is exactly the same as(RC220318).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_001012507

ORF Size: 264 bp

C6ORF173 (CENPW) (NM_001012507) Human Tagged Lenti ORF Clone - RC220318L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001012507.1</u>

 RefSeq Size:
 1135 bp

 RefSeq ORF:
 267 bp

 Locus ID:
 387103

 UniProt ID:
 Q5EE01

Cytogenetics: 6q22.32 **MW:** 10.1 kDa

Gene Summary: Component of the CENPA-NAC (nucleosome-associated) complex, a complex that plays a

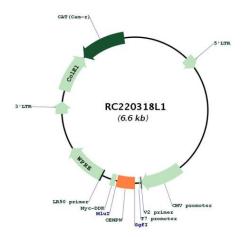

central role in assembly of kinetochore proteins, mitotic progression and chromosome segregation (By similarity). The CENPA-NAC complex recruits the CENPA-CAD (nucleosome distal) complex and may be involved in incorporation of newly synthesized CENPA into centromeres (By similarity). Part of a nucleosome-associated complex that binds specifically to histone H3-containing nucleosomes at the centromere, as opposed to nucleosomes containing CENPA. Component of the heterotetrameric CENP-T-W-S-X complex that binds and

supercoils DNA, and plays an important role in kinetochore assembly. CENPW has a fundamental role in kinetochore assembly and function. It is one of the inner kinetochore proteins, with most further proteins binding downstream. Required for normal chromosome

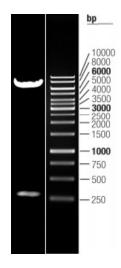

organization and normal progress through mitosis.[UniProtKB/Swiss-Prot Function]
