Protein Pathway		
MW:	62.59 kDa	
Gene Summary:	This gene encodes a member of the carboxylesterase large far responsible for the hydrolysis or transesterification of variou and heroin, and endogenous substrates with ester, thioester participate in fatty acyl and cholesterol ester metabolism, and brain barrier system. This enzyme is the major liver enzyme a clearance. Mutations of this gene cause carboxylesterase 1 d variants encoding three different isoforms have been found the RefSeq, Jun 2010]	s xenobiotics, such as cocaine , or amide bonds. They may d may play a role in the blood- and functions in liver drug eficiency. Three transcript
