TSPAN4 (NM_001025237) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: TSPAN4 (NM 001025237) Human Tagged ORF Clone Lentiviral Particle

Symbol: TSPAN4

Synonyms: NAG-2; NAG2; TETRASPAN; TM4SF7; TSPAN-4

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM_001025237

ORF Size: 714 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC220485).

Sequence:

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 001025237.1</u>, <u>NP 001020408.1</u>

 RefSeq Size:
 1479 bp

 RefSeq ORF:
 717 bp

 Locus ID:
 7106

 UniProt ID:
 014817

 Cytogenetics:
 11p15.5

Protein Families: Transmembrane

MW: 26.1 kDa

Gene Summary:

The protein encoded by this gene is a member of the transmembrane 4 superfamily, also known as the tetraspanin family. Most of these members are cell-surface proteins that are characterized by the presence of four hydrophobic domains. The proteins mediate signal transduction events that play a role in the regulation of cell development, activation, growth and motility. This encoded protein is a cell surface glycoprotein and is similar in sequence to its family member CD53 antigen. It is known to complex with integrins and other transmembrane 4 superfamily proteins. Alternatively spliced transcript variants encoding different isoforms have been identified. [provided by RefSeq, Jul 2008]
