NRP2 (NM_003872) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: NRP2 (NM_003872) Human Tagged ORF Clone Lentiviral Particle

Symbol: NRP2

Synonyms: NP2; NPN2; PRO2714; VEGF165R2

Mammalian Cell

Selection:

None

Vector: pLenti-C-Myc-DDK (PS100064)

 Tag:
 Myc-DDK

 ACCN:
 NM_003872

 ORF Size:
 2778 bp

ORF Nucleotide

Sequence:

The ORF insert of this clone is exactly the same as(RC220706).

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 003872.2

 RefSeq Size:
 6656 bp

 RefSeq ORF:
 2781 bp

 Locus ID:
 8828

 UniProt ID:
 060462

 Cytogenetics:
 2q33.3

Protein Families: Druggable Genome

MW: 104.26 kDa

Druggable Genome, Transmembrane

Gene Summary:

This gene encodes a member of the neuropilin family of receptor proteins. The encoded transmembrane protein binds to SEMA3C protein {sema domain, immunoglobulin domain (Ig), short basic domain, secreted, (semaphorin) 3C} and SEMA3F protein {sema domain, immunoglobulin domain (Ig), short basic domain, secreted, (semaphorin) 3F}, and interacts with vascular endothelial growth factor (VEGF). This protein may play a role in cardiovascular development, axon guidance, and tumorigenesis. Multiple transcript variants encoding distinct isoforms have been identified for this gene. [provided by RefSeq, Jul 2008]
