Gene Summary:This gene product was isolated on the basis of its interaction with BRCA2 and p21 proteins. It
is an evolutionarily conserved nuclear protein with multiple interacting domains. The N-
terminal half shares moderate homology with regions of calmodulin and M-calpain,
suggesting that it may also bind calcium. Functional studies indicate that this protein may be
an important cofactor for BRCA2 in tumor suppression, and a modulator of CDK2 kinase
activity via p21. This protein has also been implicated in the regulation of BRCA2 and RAD51
nuclear focus formation, double-strand break-induced homologous recombination, and cell
cycle progression. Multiple transcript variants encoding different isoforms have been
described for this gene. [provided by RefSeq, Jul 2008]
